

# ATKINSON ENGINEERS

## 150 YEARS IMPROVING TEXAS

In 1845 Texas became the 28<sup>th</sup> state of the United States. President Polk sent General Zachary Taylor (later President) to Texas with a force of 3,000 men to defend the new South border from Mexico. Our great, great, great grandfather, Charles Arden Russell was one of the 3,000. In 1846, he retired from the Army and became a deputy surveyor on the Texas frontier. Six generations later, we are still surveying and engineering Texas.

Atkinson Engineers designs public drainage, water, and sewer systems, as well as water/wastewater treatment facilities, and public roads. We also offer full range of surveying services.

We differentiate ourselves from other firms by delivering unsurpassed responsiveness to our clients' needs. Our **"No Ties and No Voicemail"** philosophy is a core value that insures our clients have a partner they can turn to at a moment's notice to solve problems for them now rather than later. Our "All Hands" feasibility discussion is extremely valuable to our clients, where we put all the firm's engineers, all applicable data, and you in a room together to get a preliminary project plan in place within hours not weeks. Engineering philosophies and unique designs developed over six generations make Atkinson Engineers a trusted partner to our clients. Our four largest clients have each relied on our engineering and surveying expertise for over 35 years. We would like an opportunity to show you why.
